

Fusion Intervention Overview

Welcome to Fusion, a new kind of insurance company, built from the ground up to think, operate and evolve like a cybersecurity company. Over the past two decades, we've led from the front: building global threat-sharing networks, stopping millions of attacks, and earning a U.S. patent for our threat correlation engine. Bringing that expertise into insurance was the natural evolution, giving clients a way to reduce cyber risk proactively, both before and after coverage begins.

As a Fusion insured, you now have access to a suite of proprietary cybersecurity interventions included with your policy **AT NO ADDITIONAL COST**. These are simple, effective tools designed to enhance what you already have in place, without adding friction or complexity.

As your insurer, we bring new capabilities, data, and insight that work with your existing security, helping you manage risk more easily and act before threats become losses. Fusion is more than just coverage, it's a smarter, proactive approach to cyber protection.

FusionHub is your secure Dashboard for everything Fusion.

Inside, you will immediately find your Policy Form, Claims Reporting Guidelines, your initial Network Perimeter Scan, and directions on how to take advantage of any of the free cyber security interventions that might help secure your business.

In addition, your participation efforts will be recognized and will have positive impact on your insurance premium the following year.

Fusion Hub

FusionLENS (Live Evaluation of Network and Security): A deeper scan of your company's digital footprint and threat exposure, before and after you're insured.

- Identifies open ports, outdated software, exposed RDP, misconfigured cloud storage, etc
- Scans for dark web mentions, blacklist status, and blockchain-related threats

FusionPass: A secure, MFA-enabled password manager available to all insured employees.

- Strengthens your first line of defense by protecting employee credentials
- Enforces password hygiene across your organization

FusionPhish: A real-world phishing simulator designed to test and train your team's cyber instincts.

- Sends realistic phishing emails to employees
- Tracks clicks and identifies high-risk users

Training/Awareness Videos - On-demand cyber awareness training, built for busy teams.

FusionEdge: A global network of sensors and threat intelligence nodes built to detect and block attacker behavior.

- Detects attacker infrastructure (malware hosts, botnets, phishing domains)
- Identifies emerging threats targeting SMBs
- Feeds real-time threat signals into the Fusion defense stack
